

Magento Developer

Overview

Magento developers should have a robust and proven background in object-oriented programming using PHP. They should be passionate about adding value and giving customers a delightful experience through technical competence.

What We Are Looking For?

Highly focused individuals who are passionate about technology and make stuff work

Logical & reasoning ability

Excellent communication skills

Confident, self-motivated individuals, who work well in team environments

Main Responsibilities:

Candidate will work in PHP/MySQL/Magento. Job responsibilities include laying out the architecture / base for Magento based websites, full lifecycle application development including analysis, design and coding.

Candidate will be required to create and maintain technical documentation. Candidate will work in a team environment, as well as independently. He is also required to adhere to coding standards and other development processes (using tools like Jira, SVN etc).

The candidate should be able to work without supervision to complete project task and must possess initiative to address issues and opportunities.

Candidate would be required to lead and guide the

junior/mid-level developers over their implementations, integrate their works and maintain integrity of application and its architecture

Candidate would be required to participate in client calls, gather requirements to be led by him and members working under him, prepare WBS (work breakdown structure), provide estimates and cover deliveries of assigned modules.
