

Easily Manage Your Magento Store Inventory Based on Customer Group

We at [Envision Ecommerce](#) are glad to introduce you our next [Magento extension](#) for your Magento store – [Inventory Based on Customer Group](#)! The extension is aimed to help you manage your Magento store inventory on the basis of specific customer groups.

With [Inventory Based on Customer Group extension](#), it's possible for Magento admin to maintain accuracy of product data while dealing with particular customer groups such as retailer group, wholesaler group, general customer group, etc. The Magento admin can utilize this extension to keep specific backups for specific customer groups and also assign inventory to easily manage in/out stock products. If it is a case of multiple products, the extension also provides an opportunity to admin to import bulk products through CSV file on account of the required product quantity & customer group.

Here are some highlighted features of this extension:

- Custom Inventory Groups
- Import Quantities for Multiple Products Within one click via CSV from the admin panel
- Easy & Smooth Inventory Management Process
- Supports both bundled & configurable products
- Easy-to-use & easy-to-install

Overall, the extension lets you manage products in mass & save tons of time on routine inventory tasks. Apart from such [Magento extension development](#), our certified Magento developers are planning to stick to Magento platform for years further on and also open to your suggestions & continually updating earlier eCommerce products to match your

requirements.
