

# How to Enable/Disable Magento 2 Modules in The Shell?

Sometimes, it is urgently required to enable or disable currently available Magento 2 modules. And, you don't have enough time to do it manually. You will be happy to know that you can enable/disable such modules in the shell. The blog post is going to show you how to enable or disable [Magento 2 modules](#) in the shell instead of doing it manually:

## How to Disable Magento 2 Module?

**Run the following commands to disable a module:**

```
php -f index.php -- module-disable --modules=Envision_Testmod
```

The following modules have been disabled: Envision\_Testmod

## How to Enable a Magento 2 Module?

**Run the following commands to enable a module:**

```
php -f index.php -- module-enable --modules=Envision_Testmod
```

The following modules have been enabled: Envision\_Testmod

## How to ensure that the enabled modules are accurately registered?

To ensure that the enabled modules are accurately registered, you need to run **'update'** command:

```
php -f index.php -- update
```

The setup tool updates app/etc/config.php
