

Upgrade to 1.9.3.3 or Apply SUPEE-8167 – Latest PayPal IPN Upgrade Notification for Magento Merchants

If you're a Magento merchant who has been using PayPal IPN (Instant Payment Notification) service, you have possibly received an email alerting you to upgrade to 1.9.3.3 or Apply SUPEE-8167 in order to avoid this service disruption.

This upgrade will last till the end of June, i.e. June 30, 2017. And, from June 30, 2017, PayPal IPN service will no longer permit merchants to utilize HTTP while posting messages back to PayPal for verification. As a merchant, you will only be allowed to use HTTPS for such postbacks.

If you've not made the essential changes, we urge you to do the followings before this service disruption starts affecting your Magento store:

- Enterprise Edition 1.14.3.3 or apply the SUPEE-8167 patch
- Community Edition 1.9.3.3 or apply the SUPEE-8187 patch
- Magento 2.0.15 when it becomes accessible (probably the next week of June)

Note: If you're running **Magento 2.1.x**, there is no need of any update as all **Magento 2.1.x** versions already comply with this change.

Full technical details can be found at https://www.paypal-knowledge.com/infocenter/index?page=content&widgetview=true&id=FAQ1916&viewlocale=en_US. Besides, Community Edition Download Page (<https://magento.com/tech-resources/download>) includes the patch to download it.

Because this security upgrade is too technical in nature, we suggest you consult with professional developers to apply such changes to your online store. Moreover, our [certified Magento developers](#) are ready to help you as they have successfully upgraded or applied such security patches for over 80+ stores earlier. Connect today with our [Magento services](#) to apply this upgrade or patch fast & safe for you.
